Examples of Major Chemical Applications and Final Products

Major chemical	Characteristic	Final products
Super-roughening type adhesive enhancement CZ series	A copper surface treatment agent that enhances adhesion between copper and resin. It is mainly an adhesion improver for PKG substrates, and is also used for high-density PCBs.	Infrastructure (Generative AI, 5G/6G-related, data centers, etc.) and high-function devices (PCs, smartphones, tablet PCs, etc.)
Adhesion improvers for multilayer substrates V-Bond series	A copper surface treatment agent that enhances adhesion between copper and resin. Adhesion improver mainly for multilayer substrates. Not used for PKG substrates.	Automobile, smartphones, Satellite communications etc.
Anisotropic etchant EXE series	Fine wiring can be formed through subtraction. Etching agent for COF substrates.	TV and PC monitors, etc.
Selective etchant SF series	Etching agent with selectivity to copper.	Tablet PCs, etc.

Our Strength: Interlayer Adhesion Technology

The CZ series, our main products, is used as an adhesion promoter in the parts where copper contacts with resin. It is an indispensable technology in the process of improving adhesion between the copper and the build-up resin of package substrates.

- Places where the CZ series is used
- Copper
- Solder masks
- Resin

As package substrates become larger and adopt more layers
⇒ **The amount of CZ series used increases**
