

About our business

The MEC group will contribute to the society by “Creating and Fostering Value at Various Interfaces”.

MEC's Philosophy

M Machinery + E Electronics + C Chemistry

The origin of the Company name MEC is “Machinery”+“Electronics”+“Chemistry”. It was named with the idea of fusing these elements together to create something new. Shortly after its founding, the company motto, “Enjoy your work”, was set out. Based on our principles of “Visionary Technology”, “Reliable Quality” and “Meticulous Service” we have freely conceived ideas; and since our founding, we have researched, developed, manufactured, and sold chemicals used in the process of manufacturing electronic substrates, and supported the development of the electronics industry.

MEC's strength

Our strength is “Creating and Fostering Value at Various Interfaces” that we have been researching and developing. We have done this while placing at the core the copper surface treatment technology cultivated over many years in the chemicals business for electronic substrate parts. Our products create an invisible “interface” at the boundary where metal and resin meet.

We will continue to contribute to society by providing high-value-added and optimal products and services. We will do so based on the technology we have cultivated in developing chemicals for manufacturing electronic substrates in response to changes in the Fourth Industrial Revolution, brought about by the IoT and AI that will continue to progress in the future.
