Provisioning of new value to the society with “Creating and Fostering Various Interfaces Adhesion Technology”, and We will work to improve corporate value in the ESG field.

Kazuo Maeda  
CEO & President

The pandemic of COVID-19 has continued for over a year and is still affecting both people's lives and the economy.

We would like to express our deepest gratitude and respect to those who have supported the medical field at the forefront of treatment for a long period of time. We hope that the pandemic will end as soon as possible, and we will do everything we can for that.

## We have supported growing industries with our unique technologies

The living environment surrounding us is undergoing a major transformation with the rapid evolution of digital technology through the development of the Internet of Things (IoT), artificial intelligence (AI), and the 5G communication network that supports them.

Our Company was established in 1969, and along with the progress of digitalization in society, we have built a

foundation as a manufacturer that develops, produces, and sells chemicals for manufacturing electronic substrates. Our technology, which adds value to the interface between metal and resin, supports the evolution and sophistication of electronic products and plays a role in helping people live rich lives.

We have been able to continue business for more than half a century because we have been involved in growth industries based on our management principle, and because we have delivered high-quality products and services backed by reliable technology. That has been our strength.
